

## Lab 6

### Bash Scripting

#### Part 1: Design a Ping Scanner

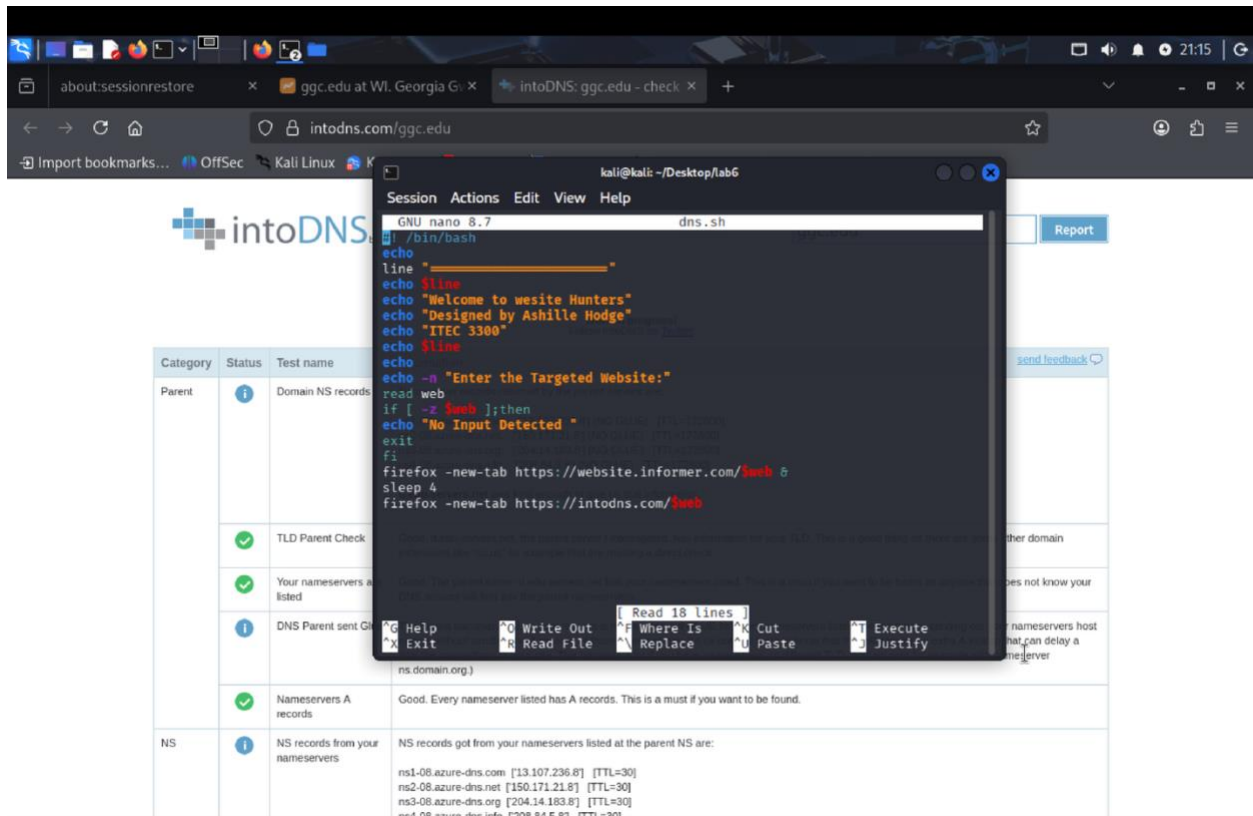

Use Bash scripting and design a ping scanner. The ping scanner should ask the user to input the domain and number of packets to be transmitted.

```
GNU nano 8.7 ping.sh
#!/bin/bash
line="-----"
echo $line
echo "Welcome to Ping Scanner"
echo "Designed by Ashille Hodge"
echo "ITEC 3300"
echo $line
echo -n "Please enter the website to ping:"
read web
echo -n "Enter no. packets:"
read pack
echo "Lets ping $web"
echo
ping -c $pack $web
echo $line
echo "Thank you for ping"
echo $line
```

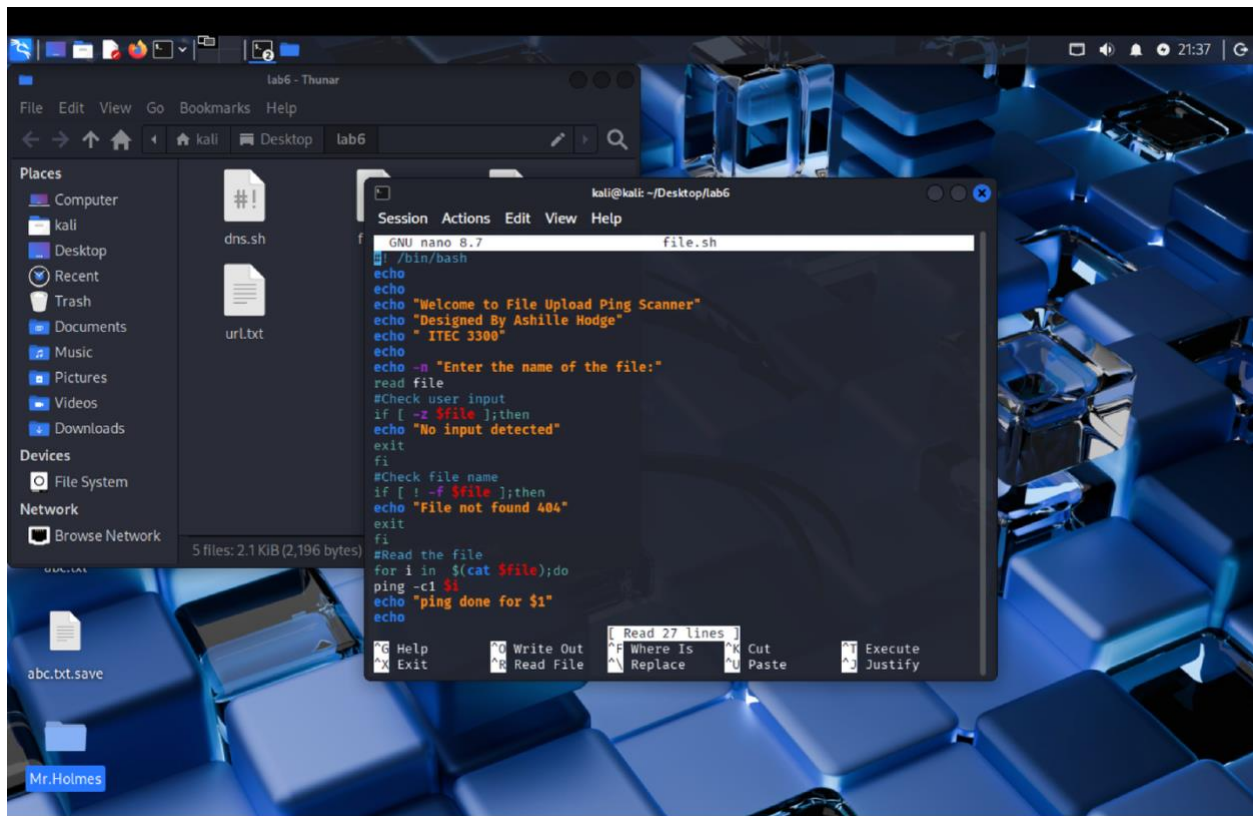

#### Part 2: Design a DNS Recon tool using bash

Use Bash scripting and design a DNS whois reconnaissance tool. The tool should be able to look for null response.

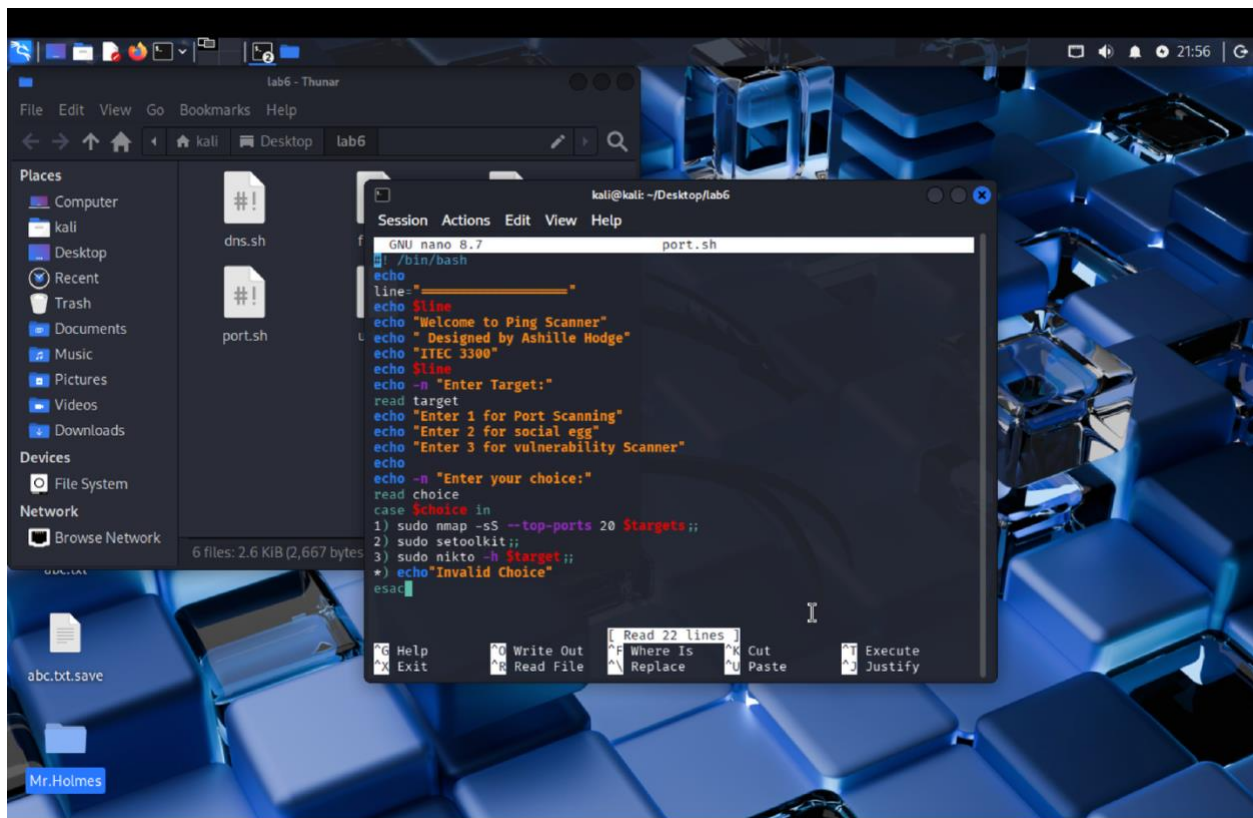

### Part 3: Design a Ping scanner which can read the file

Use Bash scripting and design a ping scanner which allows the user to use a text file and scan the domains (ping) in that text file.

#### Part 4: Design a Port Scanner using Bash

The tool should be able to offer: OS detection, common 20 port status and simple Port scan.

## Part 5: Social Engineering and Vulnerabilities Scanning
