

Class Assignment 2: Information Gathering and Setting up Honeypot

Part 1: Information Gathering

1. Use any Ethical hacking tool and gather the following Information (You can type the answer or screenshot):

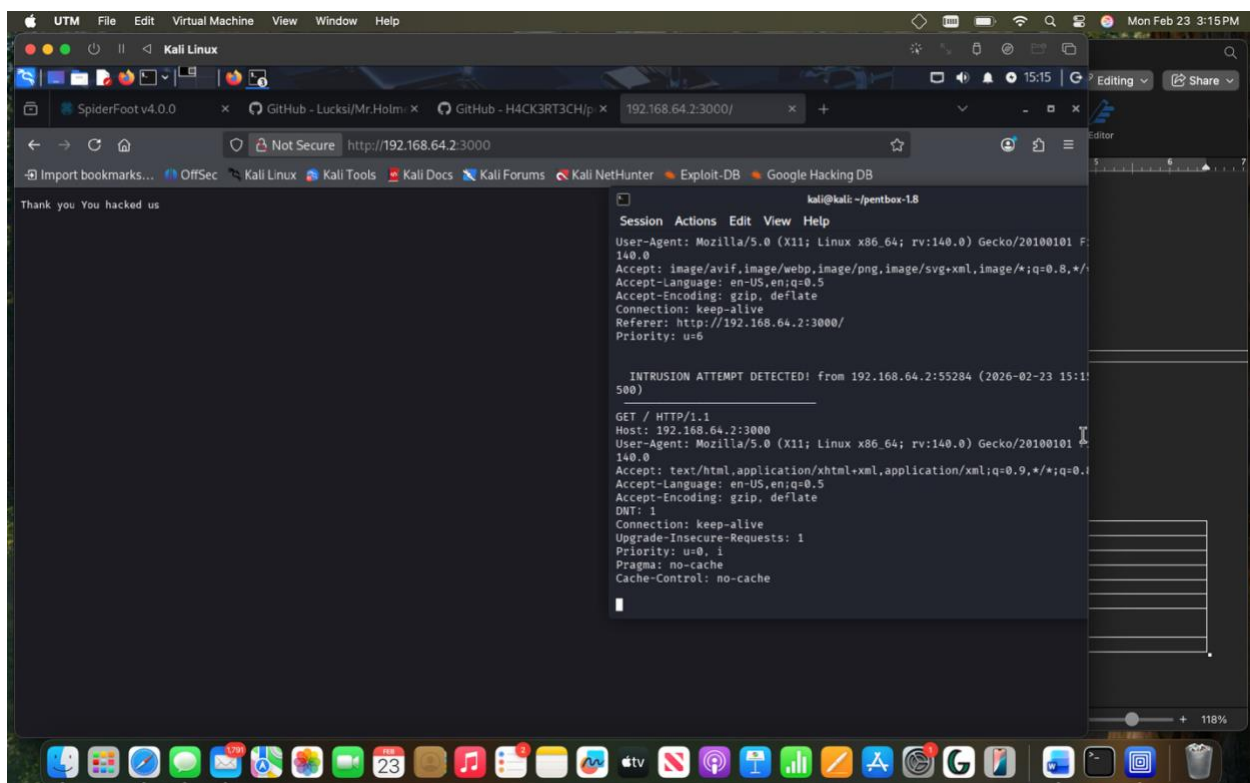

Website information: **testphp.vulnweb.com**

- a. Hosting Company- **Amazon**
- b. Location of the web server- **Seattle**
- c. IP addresses of the domain and subdomains (only two)-
Testasp.vulnweb.com, testhtml5.vulweb.com
- d. Status whether the website is up or not. **Up and running**
- e. Name and Email address of the key IT person. **Matthew Sciberras, Email Matthew.Scriberras@invicti.com**
- f. Enlist which of the directories are not allowed/indexed with search engine?

N/A

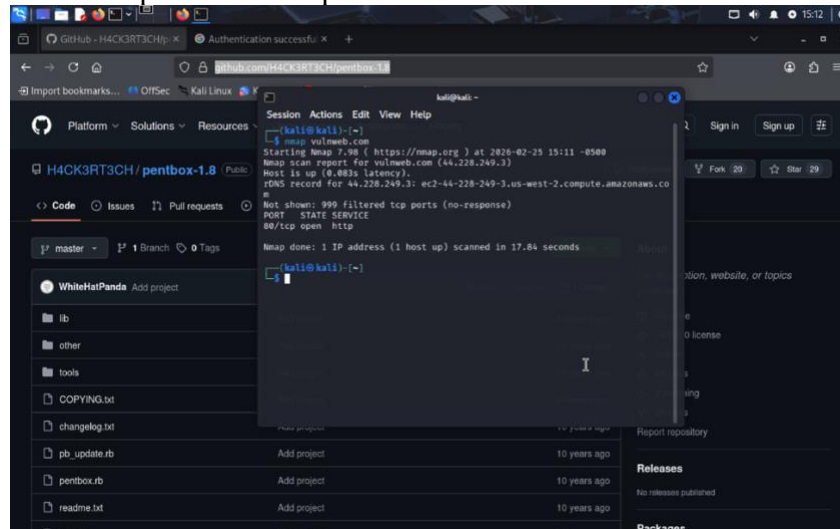

Part 2: Set Up a Honeypot

1. Install a Honeypot that can collect information about the attackers and sends alerts to network administrators. You can open any port to host the honeypot and make the attacker visit the site. Paste the screenshots of some of the results?

Part 3: Port Scanning

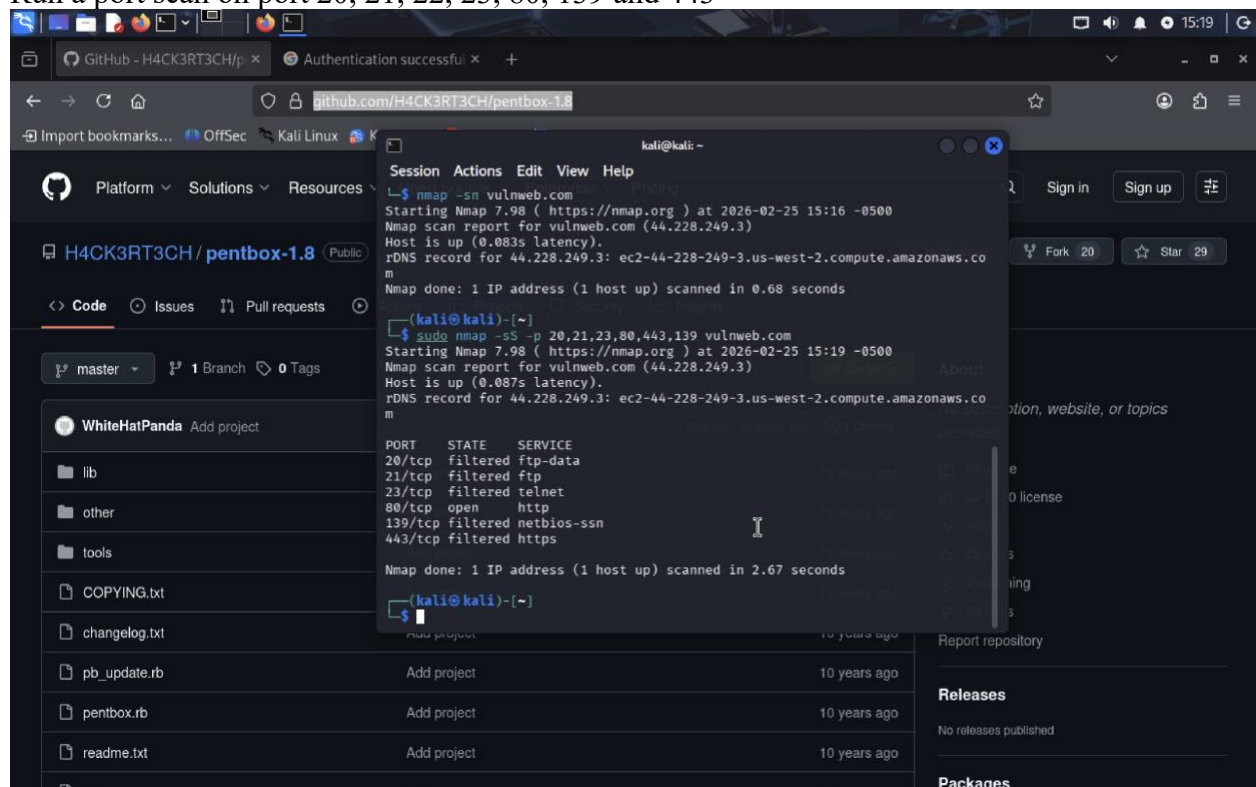

1. Use NMAP and perform the following test on your IP address (Public IP) or testphp.vulnweb.com
 - a. Run a simple scan. Nmap vulnweb.com

```
kali@kali:~$ nmap vulnweb.com
Starting Nmap 7.90 ( https://nmap.org ) at 2026-02-25 15:11 -0500
Nmap scan report for vulnweb.com (44.228.249.3)
Host is up (0.683s latency).
rDNS record for 44.228.249.3: ec2-44-228-249-3.us-west-2.compute.amazonaws.com
Not shown: 999 filtered tcp ports (no-response)
port STATE SERVICE
80/tcp open  http

Nmap done: 1 IP address (1 host up) scanned in 17.84 seconds
```

2. Check the OS testphp. Linux 2.6.32 (89%). Sudo nmap -O
 - a. Run a Ping Scannmap -sn vulnweb.com (host is up)
 - b. Run a port scan on port 20, 21, 22, 23, 80, 139 and 443

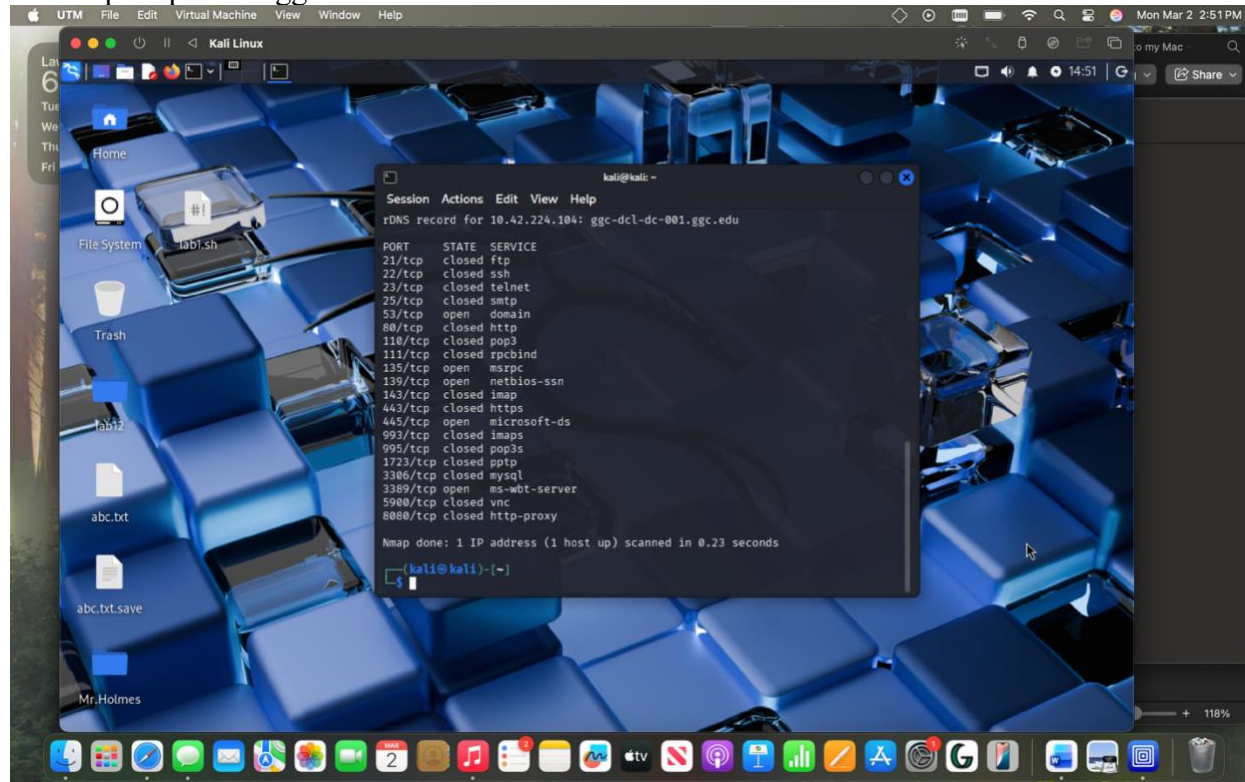

```
kali@kali:~$ nmap -sn vulnweb.com
Starting Nmap 7.90 ( https://nmap.org ) at 2026-02-25 15:16 -0500
Nmap scan report for vulnweb.com (44.228.249.3)
Host is up (0.083s latency).
rDNS record for 44.228.249.3: ec2-44-228-249-3.us-west-2.compute.amazonaws.com
Nmap done: 1 IP address (1 host up) scanned in 0.68 seconds

(kali@kali)~$ sudo nmap -ss -p 20,21,23,80,443,139 vulnweb.com
Starting Nmap 7.90 ( https://nmap.org ) at 2026-02-25 15:19 -0500
Nmap scan report for vulnweb.com (44.228.249.3)
Host is up (0.087s latency).
rDNS record for 44.228.249.3: ec2-44-228-249-3.us-west-2.compute.amazonaws.com

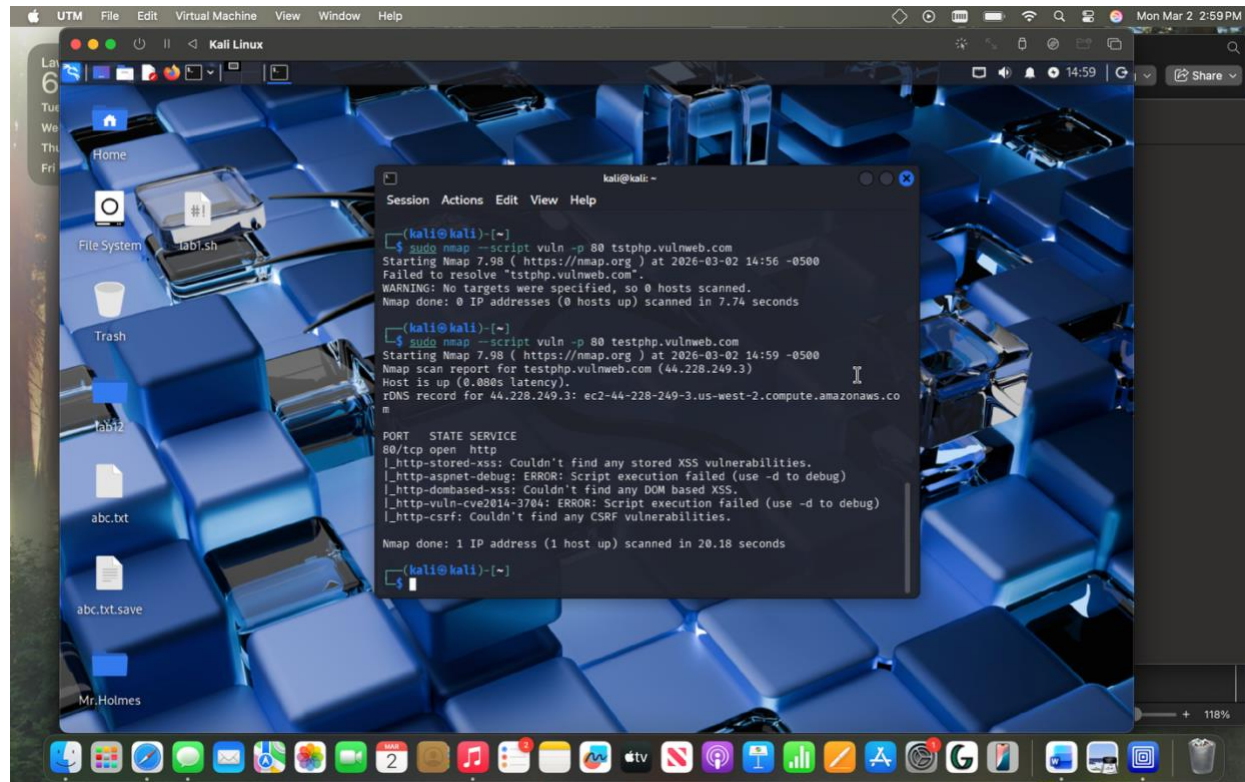

PORT      STATE SERVICE
20/tcp    filtered ftp-data
21/tcp    filtered ftp
23/tcp    filtered telnet
80/tcp    open  http
139/tcp   filtered netbios-ssn
443/tcp   filtered https

Nmap done: 1 IP address (1 host up) scanned in 2.67 seconds
```

c. Scan top 20 ports of ggc.edu

d. Perform a Vulnerability scan (cve built in script): Target: testphp.vulnweb.com

Self-Assessment Task

Target: ggc.edu

Please complete the table

Location of the Server	Seattle, WA
Key Person	Dr. Jann L. Joseph
Email Address	cmillerdivine@ggc.edu
Open Ports	Nmap(53,88,135,139,445,464,593,636,1688,2701,3268,3669,3389,5985)
Subdomains (3-4)	itservices.ggc.edu, libguides.ggc.edu
Public IP address	52.6.113.162, 54.227.181.95
Any Publicly Disclosed Vulnerabilities/Breach	n/a
Basic Protection/Security Information	n/a
